Customer Upgrades CAT Excavators to Hensley GET Systems

The maintenance manager at a large construction site in Northern Canada was so impressed with the simplicity of the Hensley pin system and ease of change out, that he is now converting his entire fleet of CAT excavators to the XS115 GET system.

The entire operation is extremely happy with the performance of their new Hensley GET systems and have come to recognize that the Hensley brand implies quality.

Quality of design, product, and performance!

EASY INSTALLATION, QUICK CHANGE-OUT

Easy and quick installation and replacement is a key advantage of the XS System. It just takes minutes to change teeth. Simply unlock the fastener with a socket wrench, remove the worn tooth, put on a new tooth and you're ready to go back to work.

STEP 1
As shown, place tooth onto adapter, always observing proper safety procedures.

STEP 2
Insert fastener, making sure it is in the unlocked position.

STEP 3
To lock, use the correct size socket, rotate the pin locking shaft 90° clockwise to finish the installation.

STEP 4
When removing the fastener, use the correct size socket to rotate the pin-locking shaft 90° counter-clockwise.
